

Conceal's light texture simulates the natural roughness of wood. Plus, Conceal's 7 colors blend in with the most popular stains used in the log home industry.

## Performance:

**Recovery %** - Recovery percent is important because this is a measurement of the sealant's ability to be stressed and then return to its original strength and location in order to maintain a good seal: *The higher the number, the better recovery.*

**% Elongation at Break** is an indicator of the overall ability of the sealant to handle extreme movement: *The greater the number, the better.* NOTE: Ultimate elongation is not necessarily an indicator of the sealant's ability to handle continual and cyclic movement.

**Tensile Strength** - Sealants with a lower tensile strength have better performance because this is a measure of the sealant's ability to stretch and compress more easily without putting undue stress on the bond line. With less stress at the bond line, there will be fewer adhesive failures which are much more involved and costly to repair than cohesive type failures. *The lower the number, the better.*

PRODUCT	100% Stretch & Recovery %	% Elongation At Break	Tensile Strength (psi)
Conceal	98	550	20
Energy Seal	91	250	89

## Here's what the experts say about Conceal.

### Application & Tooling:

*"The ease of troweling and minimal clean-up makes this one of Sashco's finest new products."*

**Bill Nay, Log Care**

*"My crew & I really like the tooling characteristics of Conceal—it's quick, clean and easy to use."*

**Mark Venery, North Country Log Works**

*"Conceal cleans up and trowels better than any other caulk I've ever used. It probably saved me 20% of my time."*

**Steve Gallaway, Roche Jaune Chinking**

*"I tooled Conceal dry using metal trowels. It tooled fantastic without using a release agent, and because I didn't need a release agent, there was virtually no clean-up required--so I saved time in application and in clean-up."*

**Stephen Burns, Elk Mountain Chinking**

### Appearance:

*"We like it a lot. We will use a lot of it, especially on our Thermography work. . . where the customers want the sealant to be unnoticeable."*

**Tracy Hansen, Stormbusters**

*"It looks fantastic! no sheen, it melded into the wood."*

**Stephen Burns, Elk Mountain Chinking**

### 7 Colors to match most log home stains.

**Prairie Gold**

**Harvest Wheat**

**Warm Honey**

**Golden Mesa**

**Canyon Wall**

**Santa Fe Trail**

**Red Earth**
